Subject: RE: Site visit to see fenceline stations? VOC method comparison
Date: Wednesday, May 14, 2014 3:16:25 PM

I am sorry for the late reply on this. We could certainly arrange some time with you during the week of May 19th or 26th to visit the sites. The stations will be inside the refinery. So, you will need appropriate PPE (hardhat, safety glasses, work shoes/boots, FRC/Nomex).

We will also need to really understand what your "scope of work" will be on the passive tubes/summa canisters on-site, to ensure that the job is appropriately safety assessed.

Linda Wilson

Subject: Site visit to see fenceline stations? VOC method comparison

Hi Linda - It looks like my lab folks have their ducks in a row and we can start on the VOC method comparison pretty soon. I'll be out of town next week, but was hoping a couple of us could do a site visit sometime the week of May 19th or 26. We'll need to see the fenceline stations to get an idea of how we'll be able to affix our passive tubes and Summa canisters. We should also make arrangements for a weekly site visit to set up and take down our samples.

I hope all is well with your monitoring program and everything else. I look forward to meeting you and getting started on some data collection!

Thanks,
Motria
